Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mitochondrial outer membrane protein TOM71 - yeast (Saccharomyces cerevisiae)
N/Alternate names: protein YHR117w
C.Species: Saccharomyces cerevisiae
C.Dacies: Saccharomyces cerevisiae
C.Dacesion: Sacharomyces cerevisiae
C.Dacesion: S48959; S62886
R.Latreille, P.
R.Latreille, P.
R.Latreille, P.
R.Jacession: S48959; S62886
A.Description: The sequence of S. cerevisiae cosmid 8263.
A.Description: The sequence of S. cerevisiae cosmid 8263.
A.Reference number: S46676
A.Accession: S48959
A.Modecule type: DNA
A.Modecule type: DNA
A.Residues: 1-639 <LAT>
A.Residues: 1-639 <LAT>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 16, Application US/09854856

Patent No. 6541252

GENERAL INFORMATION:

APPLICANT: Walke, D. Wade

APPLICANT: Walke, D. Wade

APPLICANT: Hilbun, Erin

APPLICANT: Donoho, Gregory

APPLICANT: True OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: Encoding the Same

TITLE OF INVENTION: Encoding the Same

FILE REFERENCE: LEX-0178-USA

CURRENT PILING DATE: 2001-05-14

PRIOR PILING DATE: 2001-05-14

PRIOR PILING DATE: 2000-05-19

NUMBER OF SEQ ID NOS: 64

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NOS: 64

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 26, Application US/09854856

Sequence 26, Application US/09854856

Patent No. 6541252

GENERAL INFORMATION:

APPLICANT: Walke, D. Wade

APPLICANT: Hilbun, Erin

APPLICANT: True OF INVENTION: C. Alexander Jr.

APPLICANT: True OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 6541252el Human Kinases and Polynucleotides

TITLE OF INVENTION: No. 65413-654

CURRENT APPLICATION NUMBER: 2001-05-14

PRIOR APPLICATION NUMBER: US 60/206,015

PRIOR APPLICATION NUMBER: US 60/206,015

PRIOR ELING DATE: 2000-05-19

SOFTWARE: PastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  399,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

Patent No. 6723700
GENERAL INFORMATION
GENERAL INFORMATION
APPLICANT: Blaschuk, Orest W.
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING CLAUDIN-MEDIATED
TITLE OF INVENTION: FUNCTIONS
FILE REFERENCE: 100086.409C1
CURRENT FILING DATE: 1999-03-30
NUMBER OF SEQ ID NOS: 480
SSCTWARE: Patentin Ver. 2.0
SSCTWARE: 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 30;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Seq

Sequence 65, Application US/08218025A

Patent No. 5556744

GENERAL INFORMATION:
APPLICANT: Weiner, David B.
APPLICANT: Weiner, David B.
APPLICANT: Williams, William V.
TITLE OF INVENTION: Methods and Compositions for Diagnosing
TITLE OF INVENTION: and Treating Certain HIV Infected Patients
NUMBER OF SEQUENCES: 197

CORRESPONDENCE ADDRESS:
ADDRESSEE: Howson and Howson
STREET: P.O. BOX 457, 321 No. 5556744ristown Road
CITY: Spring House
STATE: Pennsylvania
COUNTRY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB 4; Length 31;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels
